**DETAILED ACTION**

***Notice of Allowability***

Claims 7-9 and 16-18 have been cancelled.

**Claims 1-6 and 10-15 are allowed.**

The following is an Examiner's statement for reasons for allowance.

Consider **claim 1**, the best prior art of record found during the examination of the present application, **Westman (US 2004/0082351 A1) in view of Gourraud et al (US 2004/0249949 A1)**, fail to specifically disclose a method of creating a temporary site dependent push-to-talk/media (PTT/M) group for allowing PTT/M communications among a visiting PTT/M equipped mobile device and site based PTT/M equipped devices while the visiting PTT/M equipped mobile device is on-site wherein the PTT/M equipped devices operate on one or more inter-communicable PTT/M networks, the method comprising: detecting when a visiting PTT/M equipped mobile device is physically located on-site; registering the visiting PTT/M equipped mobile device with the site based PTT/M equipped devices and the site based PTT/M equipped devices with the visiting PTT/M equipped mobile device such that normal group PTT/M communications can take place, the registering comprising: automatically associating a pre-defined timeout period with the visiting PTT/M equipped mobile device; on a site based PTT/M equipped devices PTT/M network server, adding the visiting PTT/M equipped mobile device ID; and on a visiting PTT/M equipped mobile device PTT/M network server, adding site based PTT/M equipped device IDs; detecting when a visiting PTT/M equipped mobile device goes off-site; de-registering the visiting PTT/M equipped mobile device with the site based PTT/M

equipped devices and the site based PTT/M equipped devices with the visiting PTT/M equipped mobile device when the PTT/M equipped mobile device goes off-site, the de-registering comprising: on the site based PTT/M equipped devices PTT/M network server, removing the visiting PTT/M equipped mobile device ID; and on the visiting PTT/M equipped mobile device PTT/M network server, removing the site based PTT/M equipped device IDs; wherein two-way PTT/M communications are allowed among the visiting PTT/M equipped mobile device and the site based PTT/M equipped devices while the visiting PTT/M equipped mobile device is physically on-site, and wherein the visiting PTT/M equipped mobile device will be de-registered after the pre-defined timeout period when it cannot be detected when the visiting PTT/M equipped mobile device has gone off-site.

**Claims 2-6** are allowable because they are dependent upon claim 1.

Consider **claim 10**, the best prior art of record found during the examination of the present application, **Westman (US 2004/0082351 A1) in view of Gourraud et al (US 2004/0249949 A1)**, fail to specifically disclose a system for creating a temporary site dependent push-to- talk/media (PTT/M) group for allowing PTT/M communications among a visiting PTT/M equipped mobile device and site based PTT/M equipped devices while the visiting PTT/M equipped mobile device is on-site wherein the PTT/M equipped devices operate on one or more inter-communicable PTT/M networks, the method comprising: first discovery means for detecting when a visiting PTT/M equipped mobile device is physically located on-site; registration means for registering the visiting PTT/M equipped mobile device with the site based PTT/M equipped devices and the site based PTT/M equipped devices with the visiting PTT/M

equipped mobile device such that normal group PTT/M communications can take place, the registering comprising: automatically associating a pre-defined timeout period with the visiting PTT/M equipped mobile device; on a site based PTT/M equipped devices PTT/M network server, adding the visiting PTT/M equipped mobile device ID; and on a visiting PTT/M equipped mobile device PTT/M network server, adding site based PTT/M equipped device IDs; second discovery means for detecting when a visiting PTT/M equipped mobile device goes off-site; de-registration means for de-registering the visiting PTT/M equipped mobile device with the site based PTT/M equipped devices and the site based PTT/M equipped devices with the visiting PTT/M equipped mobile device when the PTT/M equipped mobile device goes off-site, the de-registering comprising: on the site based PTT/M equipped devices PTT/M network server, removing the visiting PTT/M equipped mobile device ID; and on the visiting PTT/M equipped mobile device PTT/M network server, removing the site based PTT/M equipped device IDs; wherein two-way PTT/M communications are allowed among the visiting PTT/M equipped mobile device and the site based PTT/M equipped devices while the visiting PTT/M equipped mobile device is physically on-site; and wherein the visiting PTT/M equipped mobile device is automatically de-registered after the pre-defined timeout period if it cannot be detected when the visiting PTT/M equipped mobile device has gone off-site.

**Claims 11-15** are allowable because they are dependent upon claim 10.

These teachings clearly differ from the claimed invention; therefore, claims 1-6 and 10-15 of the present application are considered novel and nonobvious over the prior art and, consequently, are allowed.
